

Password Reset Bypass: The Test Case to Demand

Two authentication CVEs published in 2026 look unrelated until you line up the root causes.

- 1 The class is a flow that finishes without the step that proves identity, not a broken algorithm.
- 2 CVE-2026-18963 in Keycloak carries a CVSS v3.1 base score of 9.1 and CWE-640.
- 3 The matching test case is WSTG-ATHN-09 in OWASP WSTG v4.2
- 4 CVE-2026-31813 in Supabase Auth is the same class one layer over
- 5 Coverage is the only honest promise here.
